

## Agile

1. Complete these user stories:
  - a. As a vanilla git power-user that has never seen GiggleGit before, I want to be guided through the differences in the merging process.
  - b. As a team lead onboarding an experienced GiggleGit user, I want to be able to skip the tutorial for a faster onboarding process.
2. Create a third user story, one task for this user story, and two associated tickets.
  - a. As a git beginner that has never tried GiggleGit before, I want to get through the registration part quickly so I can start learning GiggleGit faster.
    - i. Simplify registration process
      1. Ticket 1: Removed middle name field from registration form
      2. Ticket 2: Moved all fields to single page
3. This is not a user story. Why not? What is it?
  - a. As a user I want to be able to authenticate on a new machine
    - i. This is not a user story because it doesn't have any clear benefit, nor is it a non-functional requirement. It is a functional requirement.

## Formal Requirements

1. List one goal and one non-goal
  - o Goal: Conduct a user study on various regions and user types to figure out the difficulty in picking up SnickerSync, after using GiggleGit.
  - o Non-goal: Only pick users that have been working with GiggleGit for at least 2 months.
2. Create two non-functional requirements. Here are suggestions of things to think about:
  - o Non-Functional Requirement 1: PM user tracking
    1. Functional Requirement 1: Allow PMs to view user account age
    2. Functional Requirement 2: Allow PMs to filter user responses by region
  - o Non-Functional Requirement 2: Random Assignment
    1. Functional Requirement 1: Assign 50% of users to the control group
    2. Functional Requirement 2: Ensure random assignment of users to either the control or experimental group.
